

Attorney Docket: 2809/101

Vehicle Display Flag With Support Assembly

Abstract

A display assembly holds a flag upright for display at all times through use of a horizontal support bar. The horizontal support bar may include a gripping collar. The display assembly includes a mast of a certain diameter and a mounting bracket. The gripping collar fits securely onto the mast, so that the horizontal support bar is coupled to the display assembly. When a flag is simultaneously attached to both the mast of the assembly and the horizontal support bar, the flag remains upright. The assembly can be mounted to a fixture, such as the window of an automobile, by a mounting bracket or other similar device.
